

FEATURES

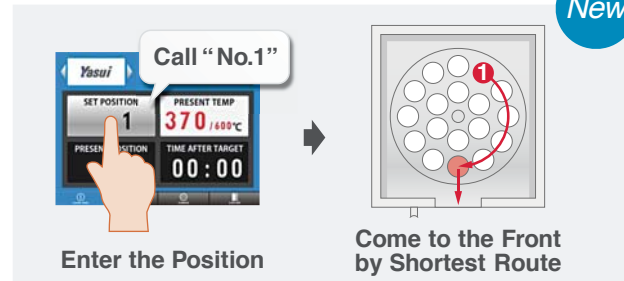

After Burner for Environment / No Smell

Recovering After Power Failure

Flask Calling System

Overheat Protection Device Safety for Stones in Flask

SPECIFICATIONS

Model	RBF 19
Code	13400000
Power	380V, 50/60Hz, 3 phase
Power consumption	17.2 kVA (including afterburner)
Net Weight	Approx. 450Kg
Dimensions	1125 (W) × 1073 (D) × 2036 (H) mm (including control box / including afterburner)
Burnout Temperature	Max. 950 degrees C
Turntable	Dia. 552 mm × 1 Tables
Capacity	19 Flasks (Dia. 101mm) 23 Flasks (Dia. 89mm) 35 Flasks (Dia. 76mm)
Max. Height of Flasks	300 (H) mm
Foot Pedal	Option

Specification and appearance are subject to changes without notice.

Model	RBF 37
Code	13100201
Power	380V, 50/60Hz, 3 phase
Power consumption	25.6 kVA (including afterburner)
Net Weight	Approx. 460Kg
Dimensions	1125 (W) × 1073 (D) × 2176 (H) mm (including control box / including afterburner)
Burnout Temperature	Max. 850 degrees C
Turntable	Dia. 552 mm × 2 Tables
Capacity	37 Flasks (Dia. 101mm) 45 Flasks (Dia. 89mm)
Max. Height of Flasks	230 (H) mm
Foot Pedal	Standard

Specification and appearance are subject to changes without notice.

Only clean and uniform burnout, leads to the best casting

The result of casting is a result of multiply by each process.

The result of casting is a result of multiply by each process. Not only the advanced casting machine will produces a fine quality in casting but also other allied equipment such as burnout furnace is playing the important role in casting. YASUI ROTATING BURNOUT SERIES will ensure to have this important process in a precise matter of both final flask temperature for casting as well as for making the clean burnout in order to have fine casting in any lost wax casting.

Leads to the gold standard in fine casting.

Uniformed Heat Transfer

YASUI RBF Series enables flasks to be burnt out with ideal uniform temperature at every part of turntables. Rotation of turntables have an effect of stirring atmosphere inside of furnace and radiation of heater can be reflected randomly. By this technology, all flasks are heated at the same temperature regardless of their position.

Conventional furnace without rotation

Heating temperature varies areawise. Through the large door, external air can easily come inside the furnace.

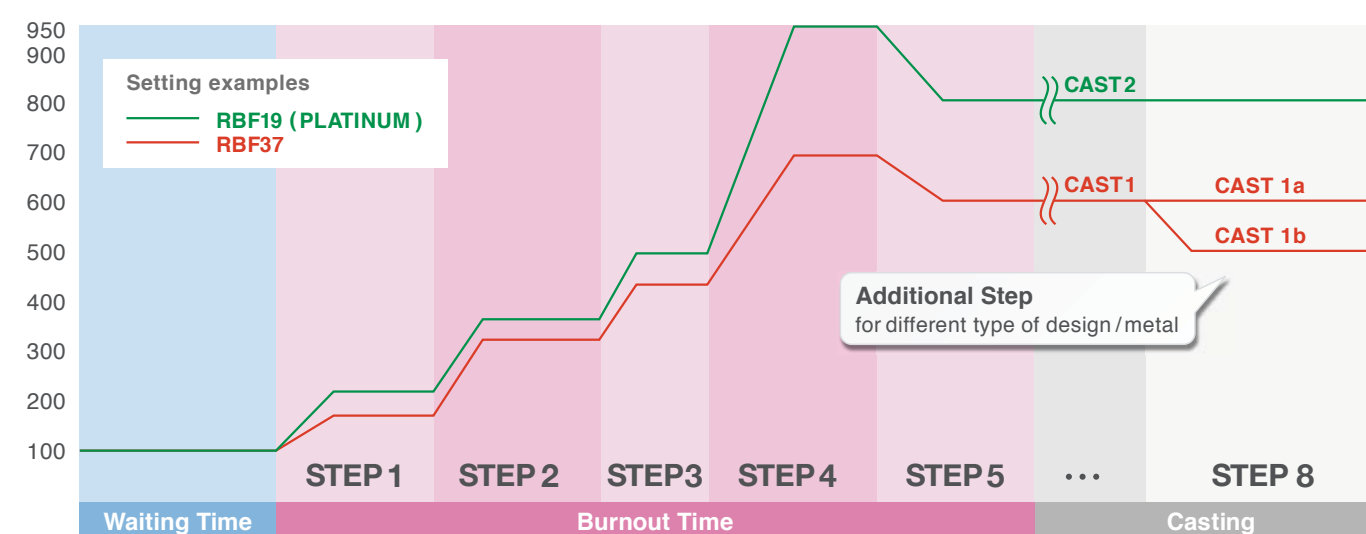

RBF series with ideal heating

Very fine and evenly heated condition created by the rotating movement. Minimum door size protects the internal air from the impact of the external air.

Up to 8 Steps / 20 Memory

Temperature Tracking System and Monitoring

Able to monitor your actual temperature transition.
